FEEDBACK

=====

Nice work overall here!!

We reviewed the high level concepts of data analytics and investigated some real world applications -- GREAT! See Notes about some "complex" questions and followup comments below.

Note: #1g) This may be a data mining problem, since determining whether a heart rate is abnormal will likely require historical data analyses.

Note: #1h) This may be a data mining problem for similar reasons, is the signal indicative of an earthquake?

#2

Great: Great note about using Various Models in #2! We will be learning about ARM shortly!!
